Renewable energy makes electricity.

Renewable energy is energy that we will not run out of.

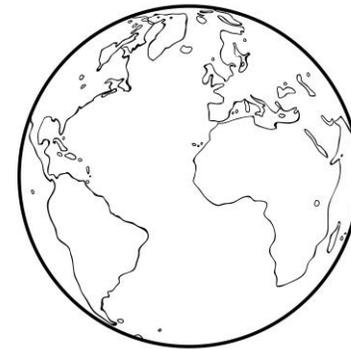

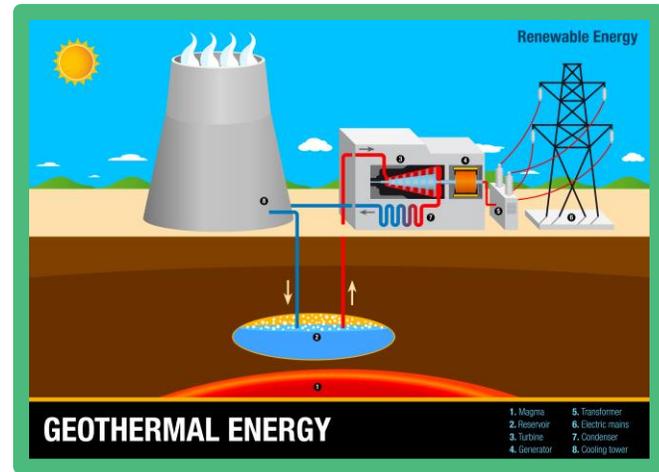

Renewable energy comes from the sun, wind, water, and earth.

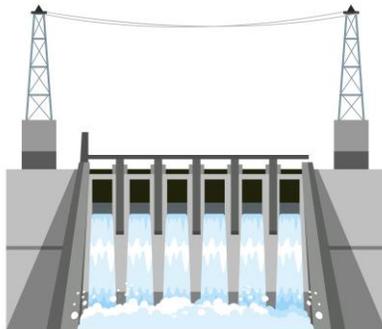

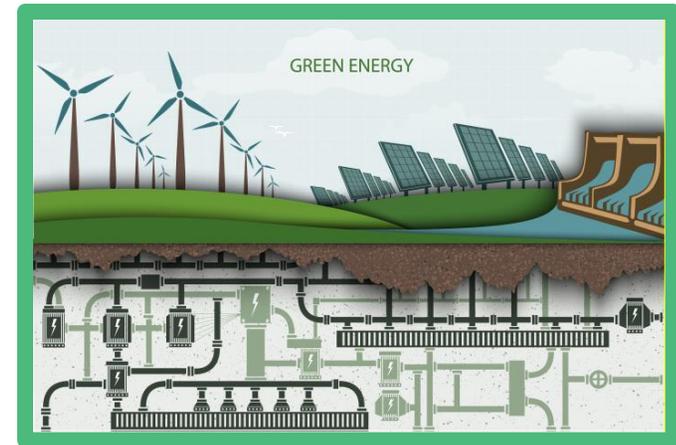

Solar energy is when the sun makes electricity.

Wind energy is when the wind makes electricity.

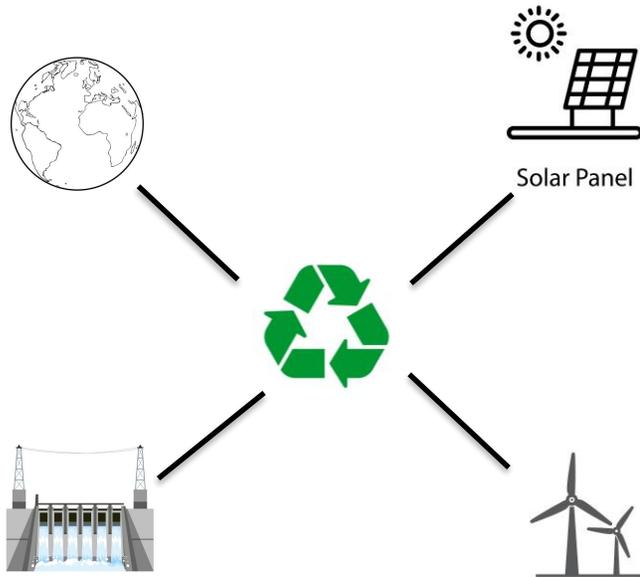

Geothermal energy is when hot water inside the earth makes electricity.

Hydropower is when water makes electricity.

Renewable energy is a better way to get electricity.

Renewable energy is called green energy because it is better for the **earth**.
