Erosion is when dirt and rocks get moved to another place.

Water is the biggest cause of erosion.

Water erosion is when WATER moves dirt and rocks.

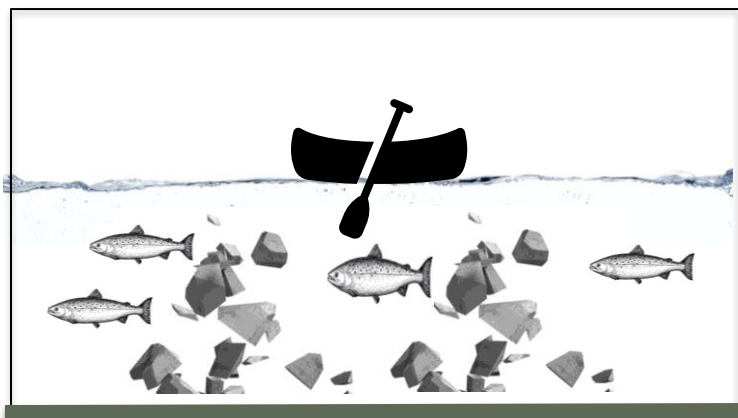

Dirt and rocks get moved by rain water.

Dirt and rocks are moved by water from melted snow.

Rivers have fast-moving water. The fast water causes erosion.

Sediment and broken rocks are pushed and moved in rivers.

Rocks and sand in an ocean are pushed by **waves**.

Dirt and rocks get moved by the **flood** water. Floods are when a lot of water is on land.
